

CCB MEETING

CDM/ISEA WORKING
GROUP

APRIL 2, 2002

JACKSONVILLE, FL

PARTICIPANTS IN NEW CCB

- Peggy Lyle
- Peggy Langlois
- Bob Milburn
- Jeff Drewry
- Ed Gale
- Gary Wasmer
- Darlene Robertson
- Del Edwards
- Heather London
- Rusti Mitten-Rynard
- Steve Morris
- Dave Rademacher
- Del Donovan
- Patty Saldona (not present)

CCB Meeting

Action Item No.:

Action Source: Autosir/CCB

Date Due:

May 02

- **Brief Description** In CDMD-OA, NAVICP Parts Query is a view of the WSF through a direct link. SHIP Parts Query is a repository started by pulling in C1 records from ASIs. This repository was never initialized and reflects C1 records pulled from ASIs starting with CDMD-OA release 3.1.3A, dated 2/8/99. Results from using both queries can vary and be confusing and misleading. Should we keep the Ship's Parts Query? Recommend that ships parts area of CDMD-OA be removed, it is not accurate and is dated.
- **Status:** Approve to remove ships parts area. Peggy Langlois to draft Autosir.

CCB Meeting

Action Item No.:

Action Source:

Date Due: May 02

- **Brief Description** Alteration Type edit table. The values in the Alt_Type table used in CDMD-OA correspond to those listed in the tech spec, both B and C versions. There is a field in this table referenced as Snap_CD. This code indicates whether authorized Ships' 3-M System will accept or reject the transaction based on the alt type. CDMD-OA is ignoring this code and sending out any value on the table. Should we enforce this code? This also relates to 2 and 3 position values and should we only be using 2 position ones? In the table, all 3 position values do not have a 'Y' = "yes" in the Snap_CD. Currently the indicator is not set, and the SNAP errors go to the CDM to process.
- **Status: Approve to set the SNAP indicator to Yes to send only valid SNAP records. Peggy Langlois to draft Autosir.**

CCB Meeting

Action Item No.:

Action Source: Autosir/CCB

Date Due:

April 12, 2002

- **Brief Description** OMMS NG does not allow changes to LSD TYPE or LSD Document Serial Number. Recommend change CDMD-OA to allow CDM to change the LSD TYPE or LSD Document S/N, but then have CDMD-OA create a delete and add transaction. Note: LSD RIN is not sent out on ASI.
- **Status:** Bob Milburn would like to research this issue to see if XMAMs is impacted. Vote Ten vote Yes, three abstain. Bob Milburn, Ed Gale and Del Donovan to research and provide response to Peggy Langlois by end of next week.

CCB Meeting

Action Item No.:

Action Source: Autosir/CCB

Date Due:

May 02

- **Brief Description** SEI Issue. Responsibility of assigning and maintaining code should be with NSLC MECH. Ship sometimes changes the value. Proposal to control the data element
 - New user role for person/activity
 - Modify RAD so it would recognize SEI workfile
 - Modify GUI so that CDMs could not change value
 - Strip off SEI during workfile load programs, except for SEI workfile.
 - If the workfile from ship only has change to SEI, then Non-agree and send CDMD-OA value back to ship.
 - If workfile from ship has other changes, than SEI will be stripped off during workfile load programs and all other changes will be processed by CDM.
- **Status: Approved concept. Peggy Langlois will write up the original CR and provide to members and NSLC for chop.**
